Algebra II - Course Syllabus

Description:
Providing further insight into advanced algebraic concepts, this two-semester course serves as an extension of Algebra I. Algebra II develops students’ ability to manipulate and use matrices in various formats to determine data relationships and also delve into function types such as polynomial, logarithmic, quadratic, exponential, and rational and periodic. High school level students will have the skills needed for state standardized tests and national exit exams upon completion of the course.

Textbook: Algebra II Techbook – Discovery Education

Course objectives:
Throughout the course, you will meet the following goals:
- Identify similarities between the real and complex number system.
- Recognize all functions as mappings between domain and range sets.
- Understand that linear and quadratic functions are a subset of polynomial functions.
- Model real-world problems using polynomial and transcendental functions.
- Apply advance probabilistic methods to make decisions, and perform statistical analysis.
- Incorporate technology in modeling and solving problems.

Contents:
Semester A
Unit 1: Recursive, Explicit, and Inverse Functions
Unit 2: Exponents and Logarithms
Unit 3: Real and Complex Solutions
Unit 4: Conic Sections
Unit 5: Multivariate Equations and Inequalities
Unit 6: Polynomial Expressions and Equations

Semester B
Unit 7: Rational Expressions and Equations
Unit 8: Rational Functions
Unit 9: Trigonometry
Unit 10: Probability
Unit 11: Data Modeling

Grading Scale
A = 90-100%
B = 80-89%
C = 70-79%
D = 60-69%
F = under 59%

Grade Weighting
Chapter Quizzes ………… 70%
Cumulative Exam ………… 30%

100%
